\*Grade is a Mill Item

## Want a smaller footprint? Try a different paper.

For 5,000 lbs of virgin fiber paper (a little over 2 skids)

Switching to **30% pcw** saves:  
**18** trees  
**13** million btu's of energy  
**6,563** gallons of water  
**1,581** lbs of CO<sub>2</sub>

Switching to **100% pcw** saves:  
**60** trees  
**42** million btu's of energy  
**21,875** gallons of water  
**5,279** lbs of CO<sub>2</sub>

statistics from:  
[www.papercalculator.org](http://www.papercalculator.org)

## What is carbon sequestration?

It's what trees do for our atmosphere!  
They take CO<sub>2</sub> out of our air and release oxygen.

## The average 2-person American household produces 42.2 tons of CO<sub>2</sub>

That's about the same as cutting and burning all the trees in a section of the Amazon rainforest the size of 4.5 football fields.

## How much of the CO<sub>2</sub> that we output in the United States is sequestered by our own forests?

Only 15% – and that's declining.

## Want to calculate how much CO<sub>2</sub> YOU produce?

Go to:  
<http://www.epa.gov/cleanenergy/energy-resources/calculator.html>

## Choose products that are produced locally and reduce your carbon footprint even more.

For your paper, check out Grays Harbor, Potlatch, and West Coast Paper's *Balance Recycled*.
